Technical Notes:

The Consumer Price (CPI) measures the rate of inflation for Samoa. It is designed to measure the change in prices for the goods purchased by households in Samoa. The CPI measures the change in prices by comparing the prices for a basket of goods and services at the collection period with the price for the same goods in a base period.

The basket of goods that is priced is based on the average expenditures of households as recorded in the Household Income and Expenditure Survey (HIES). The HIES survey identifies how much households spend on different items. The more households spend on an item on average, the more important it is to the price index, and the higher the weight in the index.

^{1/} Monthly movements in the 'headline' CPI series can be volatile. This volatility reflects price changes in particular items that may be due, among other factors, to fluctuations in commodity markets and agricultural conditions, policy changes, or seasonal or infrequent price resetting.

Underlying inflation is a measure of inflation that excludes certain items that face volatile price movements. Underlying inflation eliminates products that can have temporary price shocks because these shocks can diverge from the overall trend of inflation and give a false measure of inflation.

Date of release: 13th August 2021

The next Consumer Price Index will be released on 9th September 2021.
