What are Government Finance Statistics?

Government Finance Statistics provide statistics that enable policymakers and analysts to study developments in the financial operations, financial position and liquidity situation of the government sector in a consistent and systematic manner. Balancing items have been created to provide summary information such as Net Operating Balance (NOB) and Net Lending (+) or Borrowing (-).

The detailed data can also be used to examine specific areas of government operations, example: particular forms of taxation, level of expense and the amount of government borrowing etc. The harmonization of this system with other macroeconomic statistical systems like the System of National Accounts means that data from the GFS can be combined with data from NA to assess government performance in relation to the rest of the economy. Similarly, it can also be used for inter-country analysis of government operations, such as comparisons of ratios of taxes or expense to gross domestic product.

The Bureau is continuing with the work on refinements and improvements to the framework ensuring compliance with the latest GFSM 2014 published by the IMF. This also ensure that the latest information is incorporated in the system and reflected in the report.

This report provides the latest available information on the government financial operations and activities presented in tables attached and ordered as follows:
